## Important Announcement to Our Valued OEM Customers

Recent amendments to Canada's Energy Efficiency Regulations have been announced by NRCan today that affect products HPS supplies. These amendments to the legislation were passed on November 02, 2006 and are effective immediately. They will be officially published in the Canada Gazette Part II on November 15, 2006.

One of the amendments covered in this new legislation affects the ability HPS has in supplying its OEM customers with non-compliant C802.2 transformers. The amendment states:

**“Exempted are transformers that are shipped from the province in which it was manufactured to another province or is imported into Canada, for the purposes of being used as a component for incorporation into any other product that is to be exported from Canada.”**

As a manufacturer, we cannot interpret your intended use of the products covered by this new legislation. As a result, effective immediately HPS will only quote C802.2-00 compliant products unless you advise us that the transformer being requested is to be used as a component for incorporation into any other product that in turn is to be exported from Canada.

We encourage you to determine if your products come under these new Energy Efficiency Regulations and we would be pleased to offer a transformer design to support your needs.

HPS welcomes these changes to Canada's Energy Efficiency Regulations and as a key supplier of dry-type transformers in the industry, will continue to work closely with NRCan to continuously raise the bar on efficiency regulations and standards.
